# The easiest, most powerful digital video surveillance system in the world for home and small business

## A Whole New Way to Look

Secure your home or small business with a professional-grade digital video surveillance system in an easy-to-setup package. Record and view digital video from up to six cameras placed around your property. With email and cell phone alerts, you control your own security. And, using Remote Access, view your surveillance cameras anywhere anytime through an Internet-connected PC or compatible mobile phone.

## How It Works

LukWerks™ uses the power of HomePlug™ technology to create a powerful and secure video network over the existing electrical wires in your home and small business. This technology provides the security, reliability, and quality of a hard-wired system without the requirement of running new cables. Simply plug the Luk Cameras into any wall outlet in your home or small business and the video automatically transmits to your Windows PC via the Luk USB Receiver. The video is then instantly recognized by the powerful Werks Software™, which empowers you with all the benefits of a professionally installed digital video surveillance system.

## Why LukWerks

Luk Cameras offers indoor use with the versatility of either indoor or outdoor surveillance. Simply mount the slim-line camera to the inside of any window using the suction cup, on a desk with the desktop stand, or on a wall or ceiling with the wall mount. Face the camera looking outside the windows or inside the room. No ladders or drills are needed, and because your camera is located inside your home or business, it's secure from outside prowlers! Window glare is not a problem with LukWerks patent-pending glare shield design that allows you to see through windows clearly. After plugging your camera into the wall outlet, live video stream is available for viewing at home or away using your Internet-connected PC or mobile phone. The convenience of LukWerks requires no cables to run and no wireless routers to purchase and configure...and because it uses the existing wires in your home or small business to transport the video, your Luk Camera won't paralyze your existing network with video.

## Extend the Power of Your LukWerks

Enhance your LukWerks surveillance system by adding up to five additional Luk Cameras to your LukWerks Starter Kit with the Luk Camera Easy Add-On package. Each additional camera expands the coverage of your surveillance system. The LukWerks system can display a live view and record up to six cameras concurrently making it more powerful than many professional systems. Using the Werks software, users can configure camera resolution, motion detection, recording schedules, email and cell phone alerts, and much more for each camera.

# What's in the Box

Each Starter Kit contains everything you need for a complete single camera system:

- Werks Software
- CLC-110i Luk Camera
- Luk Camera Power Supply & Cable
- Luk USB Receiver & Cable
- Camera Suction-Cup
- Desktop Stand
- Wall Mount
- LukWerks Window Decals

The Add-On Camera packages adds one camera to your existing LukWerks Starter Kit:

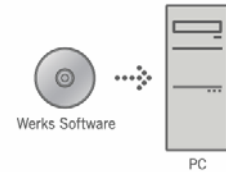

- CLC-110i Luk Camera
- Luk Camera Power Supply & Cable
- Camera Suction-Cup
- Desktop Stand
- Wall Mount
- LukWerks Window Decals

## Easy 4-Step Setup

LukWerks was designed to allow homeowners, renters, and small business owners to setup an entire system in less than 15 minutes. Using your Windows PC as the control station, you install a professional-grade system with no training, no ladders, no drills, and no new wires. Follow these four easy steps to install your starter kit.

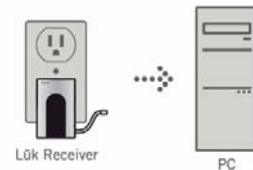

### 1: Install Werks Software

From the LukWerks CD you can install the powerful Werks Software, take an online tour, read the User Guide, or review the Software License and Hardware Warranty. During the installation process, the Werks Installer will guide you through each step of the setup.

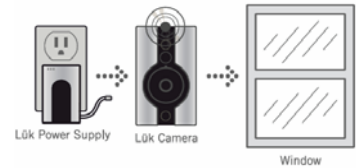

### 2: Connect USB Receiver

Plug the Luk USB Receiver into a wall outlet and connect to a USB port on your PC. The receiver transfers secure digital video from the Luk Cameras to the Werks Software on your PC.

### 3: Position Luk Cameras

The choice is yours. Use the camera suction cup to attach the camera to a window – where your Luk Camera can look out the window or into the room. The desktop stand is handy for a desk, table, or bookshelf. And the wall mount allows you to position the camera almost anywhere else.

### 4: Register for Remote Viewing

To access remote viewing, create a My LukWerks account at [www.lukwerks.com](http://www.lukwerks.com). From your account you can register several sites where you have installed a LukWerks system – your home, your business, and even your vacation home—if you're lucky enough to have one. With remote viewing, you have anywhere anytime access to live video from compatible cell phones and Internet browsers.

**Secure your home or small business and view live video from your surveillance cameras through an Internet-connected PC or mobile phone.**

**Better Than Wireless**  
Easy set up, with no cables to run and no wireless network or routers to configure.

# Features Highlights

## HIGH-QUALITY, FULL-COLOR VIDEO

LukWerks uses Microsofts® advanced Windows Media 9 Video™ technology to facilitate the transport and rendering of amazing high-resolution, full-color video surveillance footage. And by using such advanced compression technology, LukWerks minimizes the space used on your hard drive.

## SMART LUK CAMERA

Luk Cameras are the smartest cameras on the market. Engineered using the latest in digital signal processing and video image sensors, these cameras have no comparison for home and small business.

- Fast 400MHz processor
- High-quality digital color video (VGA or QVGA)
- Digital motion detection
- Adjustable eyeball
- Three-element glass, wide-angle lens
- Slim profile
- Onboard Windows Media™ encoding

## POWERFUL WERKS SOFTWARE

The Werks software includes all the power of a professional-surveillance control center. Built with an intuitive Windows interface and powerful controls, you have access to features typically found only in systems that cost \$4000 and up.

- View and record live video for up to six cameras at once
- Record motion based events
- Search and play video from archive using advanced controls
- Use automatic disk management
- Define email and cell phone alerts
- Set system security

## REMOTE VIEWING

Using the Werks Software and your My LukWerks account, you can access live video from your cameras from anywhere in the world using a Windows Media enabled Internet browser or cell phone. See what you have been missing.

- Multiple-site management from single account
- Use single camera view to watch one area
- Use cycle view to rotate through all cameras
- And, use multiple view to see all cameras at once

Standard remote viewing is provided to all customers at no charge. Enhanced remote viewing services require an additional subscription. Each new customer receives 30-days free Enhanced remote viewing.

## GREAT LUKWERKS APPLICATIONS
